

Bachelor of Science in Environmental Engineering

Department of Chemical and Environmental Engineering

Program Educational Objectives

The Undergraduate Program in Environmental Engineering will produce graduates that will:

- Excel in careers in environmental engineering having mastered engineering fundamentals, collaborative learning, communication skills, and teamwork
- Excel in graduate programs in environmental engineering and related disciplines
- Make use of the versatility of the environmental engineering program to succeed in diverse career paths including engineering design and management, policy and regulatory compliance, public health, law, and business
- Consider the environmental, ethical, and societal implications in every aspect of their work
